PROFESSIONAL SUMMARY

Computer Engineering student and self-taught Full-Stack Developer with a focus on architecting secure, scalable web systems. Demonstrated technical depth through the development of an enterprise-ready Student Management System utilizing React 19 and PostgreSQL Row Level Security (RLS) to enforce complex multi-role data integrity. Committed to technical excellence, schema normalization, and infrastructure-level security.

CORE COMPETENCIES

Architecture: Database Normalization (3NF), Schema Design **Security:** Row Level Security (RLS), RBAC Implementation

Workflow: Git-flow, RESTful API Design, Agile Fundamentals **Performance:** Code Splitting, Optimistic UI, Query Optimization

TECHNICAL SKILLS

Frontend: React 19, Hooks, Context API, Tailwind CSS, JavaScript (ES6+), Framer Motion

Backend: Node.js, Express, Supabase (Auth, Storage, RLS), PostgreSQL

Database: SQL, Schema Design, Normalization (3NF), Triggers & Procedures

Tooling: Git/GitHub, Vite, NPM, Command Line, REST APIs

FLAGSHIP PROJECT

Student Management System | Full-Stack Administration

React 19, Supabase, PostgreSQL, Tailwind

[Live Demo](#) [Source Code](#)

- Engineered** a full-stack system leveraging React 19 and Supabase to centralize student enrollment, financial tracking, and records.
- Implemented** robust Role-Based Access Control (RBAC) via PostgreSQL RLS, ensuring multi-role data isolation (Admin, Staff, Student).
- Developed** server-side logic using SQL triggers and procedures to automate matriculation ID generation and audit logging.
- Architected** an asynchronous data layer achieving sub-second sync, significantly reducing administrative workflow latency.

ENGINEERING PROJECTS (ACADEMIC)

Autonomous Maze-Solving Robot | Embedded Systems

Arduino Uno, C++, Ultrasonic Sensors

- **Developed** an autonomous navigation system utilizing Arduino Uno to detect obstacles and solve physical mazes in real-time.
- **Implemented** a Left-Hand-Rule (Wall Following) algorithm in C++ to optimize pathfinding and decision-making logic.
- **Calibrated** sensor feedback loops to achieve consistent movement and precise 90-degree turns.

EDUCATION

Bells University of Technology, Ota, Nigeria	2023 – Present
B.Eng Computer Engineering	
<i>Relevant Coursework:</i> Data Structures, Algorithms, DBMS, Computer Architecture, OOP, Discrete Maths.	
Independent Technical Study	2021 – 2023
Focus: Mastery of JavaScript fundamentals, Web API interaction, and Relational Databases.	

LANGUAGES

English: Native/Professional Proficiency | **Yoruba:** Native/Bilingual Proficiency
